

List of Tables

Number and Name of Tables	Page No.
1. Table 3.1- Computed Interaction Energies of some stacked models of 9-aminoacridine (AD) with individual bases (A, C, G and U)	28
2. Table 3.2a- Computed Interaction Energies of some stacked models of 9-aminoacridine (AD) with DNA basepair AU	28
3. Table 3.2b- Computed Interaction Energies of some stacked models of 9-aminoacridine (AD) with DNA basepair GC	28
4. Table 3.3a- Computed Interaction Energies for stacked models of 9-aminoacredine binding through minor groove to AT base-pair at different levels of theory (π - π Interaction)	29
5. Table 3.3b- Computed Interaction Energies for stacked models of 9-aminoacredine, binding through major groove to AT base-pair at different levels of theory (π - π interaction)	29
6. Table 3.4a- Computed Interaction Energies for stacked models of 9-aminoacredine binding through major groove to GC base-pair at different levels of theory (π - π interaction)	29
7. Table 3.4b- Computed Interaction Energies for stacked models of 9-aminoacredine binding through minor groove to GC base-pair at different levels of theory (π - π interaction)	30
8. Table 3.5- Calculated Interaction energies for stacked portion of optimum models of 9-aminoacridine stacked with AT and GC base pair using MP2/6-31G.	30
9. Table 4.1a – Construction of various stacking models (π - π stacking) of 9-aminoazaacridine-4-carboxamide (AZN) and AT base pair.	46
10. Table 4.1b – Construction of various stacking models (π - π stacking) of 9-aminoazaacridine-4-carboxamide (AZN) and GC base pair.	47
11. Table 4.1c – Construction of various stacking models of 9-aminoazaacridine-4-carboxamide (AZN) and base pair Stacking.	47
12. Table 4.2a – Interaction energies of Benzene-Benzene stacking in different basis sets and theory at vertical separation of 3.6Å.	47
13. Table 4.2b – Interaction energies of Benzene-Pyridine stacking in different basis sets and theory at vertical separation of 3.6Å.	48
14. Table 4.3 – The computed Interaction Energies of the optimum stacked models of 9-aminoazaacridine-4-carboxamide (AZN) and GC base pair at different theory level. (in kcal/mol)	48
15. Table 4.4 - The computed Interaction Energies of the optimum stacked models of 9-aminoazaacridine-4-carboxamide (AZN) and AT base pair at different theory level. (In kcal/mol)	48
16. Table 4.5a – Comparison of Interaction Energies for different Nx position on 9-aminoazaacridine-4-carboxamide (AZN) stacked with AT base-pair with side chain at minor grooves (HF/6-31G) (in k cal/mol)	49
17. Table 4.5b - Comparison of interaction energies for different Nx position on 9-aminoazaacridine-4-carboxamide (AZN) stacked with AT base-pair with side chain at major grooves (HF/6-31G) (in k cal/mol)	49
18. Table 4.6a - Comparison of interaction energies for different Nx position on 9-aminoazaacridine-4-carboxamide (AZN) stacked with GC base-pair with side chain at major grooves (HF/6-31G) (in k cal/mol)	49

Number and Name of Tables	Page No.
19. Table 4.6b - Comparison of interaction energies for different Nx position on 9-aminoazaacridine-4-carboxamide (AZN) stacked with GC base-pair with side chain at minor grooves (HF/6-31G) (in k cal/mol)	50
20. Table 4.7a – Variation of Net Charge on Nx of optimum stacked structure of AT and 9-aminoazaacridine-4-carboxamide (AZN).	50
21. Table 4.7b – Variation of Net Charge on Nx of optimum stacked structure of GC and 9-aminoazaacridine-4-carboxamide (AZN).	50
22. Table 5.1a – Construction of various stacking models (π - π stacking)of drugs and AT base pair.	68
23. Table 5.1b – Construction of various stacking models (π - π stacking) of drugs and GC base pair.	68
24. Table 5.1c – Modeling scheme for Stacking of substituents and base pair Stacking.	69
25. Table 5.2 – The computed Interaction energies of AZO, AZN and AZCI with Nx at different position and AT base pair. (in k cal/mol)	69
26. Table 5.3 – The computed Interaction energies of AZO, AZN and AZCI with Nx at different position and GC base pair. (in k cal/mol)	69
27. Table 5.4a – Variation of Net Charge on Nx of optimum stacked structure of AT and 9-aminoazaacridine-4-carboxamide (AZN).	70
28. Table 5.4b – Variation of Net Charge on Nx of optimum stacked structure of GC and 9-aminoazaacridine-4-carboxamide (AZN).	70
29. Table 5.5a – Variation of Net Charge on Nx of optimum stacked structure of AT and 9-oxoazaacridone-4-carboxamide (AZO).	70
30. Table 5.5b – Variation of Net Charge on Nx of optimum stacked structure of GC and 9-oxoazaacridone-4-carboxamide (AZO).	70
31. Table 5.6a – Variation of Net Charge on Nx of optimum stacked structure of AT and 9-chloroazaacridine-4-carboxamide (AZCI) stacking.	71
32. Table 5.6b – Variation of Net Charge on Nx of optimum stacked structure of GC and 9-chloroazaacridine-4-carboxamide (AZCI) stacking.	71
33. Table 5.7a – The computed Interaction Energies of the optimum stacked models of 9-oxoazaacridone-4-carboxamide (AZO) and AT base pair at different level of theory.	71
34. Table 5.7b – The computed Interaction Energies of the optimum stacked models of 9-aminoazaacridine-4-carboxamide (AZN) and AT base pair at different level of theory.	71
35. Table 5.7c – The computed Interaction Energies of the optimum stacked models of 9-chloroazaacridine-4-carboxamide (AZCI) and AT base pair at different level of theory.	72
36. Table 5.8a – The computed Interaction Energies of the optimum stacked models of 9-oxoazaacridone-4-carboxamide (AZO) and GC base pair at different level of theory.	72
37. Table 5.8b – The computed Interaction Energies of the optimum stacked models of 9-aminoazaacridine-4-carboxamide (AZN) and AT base pair at different level of theory.	72
38. Table 5.8c – The computed Interaction Energies of the optimum stacked models of 9-aminoazaacridine-4-carboxamide (AZN) and AT base pair at different level of theory.	73
39. Table 5.9 – The computed Interaction Energies of the optimum stacked models of C9 substituent of AZO's, AZN's and AZCI's with AT base pair at different level of theory.	73

Number and Name of Tables	Page No.
40. Table 5.10 – The computed Interaction Energies of the optimum stacked models of C9 substituent of AZO's, AZN's and AZCI's with GC base pair at different level of theory.	73
41. Table 6.1a – The computed Interaction Energies of the optimum stacked models of 9-anilinoacridine (ANLI) with AT base pair.	82
42. Table 6.1b – The computed Interaction Energies of the optimum stacked models of 9-anilinoacridine (ANLI) with GC base pair.	82
43. Table 6.2 – The computed Interaction Energies of the optimum stacked models of 9-anilinoacridine (ANLI) with AT and GC base pair for the aniline group staying towards minor and major grooves.	82
44. Table 6.3a – Variation of Mulliken net charges on heavy atoms of 9-anilinoacridine (ANLI) in optimum stacked structure with AT base pair.	82
45. Table 6.3b – Variation of Mulliken net charges on heavy atoms of 9-anilinoacridine (ANLI) in optimum stacked structure with GC base pair.	83
46. Table 7.1 – Comparison of the Interaction Energies (HF/6-31G) of Chromophore (AZO, AZN, AZCI) with one and two base pairs at stacking distance of 3.6 Å.	92
47. Table 7.2a- The optimum stacking distance of drugs with two AT base pair	93
48. Table 7.2b- The optimum stacking distance of drugs with two GC base pair	93
49. Table 7.3- Variation of Interaction Energies with Rotation of Drug molecule (AZO8) between Base pair (GC-GC)	93
50. Table 8.1- Computed proton affinities (PA) and corresponding pK _a 's for the most basic sites of 9-oxoazaacridone-4-carboxamide (AZO).	106
51. Table 8.2- Computed proton affinities (PA) and corresponding pK _a 's for the most basic site of 9-chloroazaacridine-4-carboxamide (AZCI).	106
52. Table 8.3- Computed proton affinities (PA) and corresponding pK _a 's for most basic site of 9-aminoazaacridine-4-carboxamide (AZN).	107
53. Table 8.4- The distance of proton from the most basic site and Intra molecular H-bond that observed in some protonated form, along with out of plane angle of O atom in protonated AZCI	107
54. Table 8.5- The distance of proton from the most basic site and intra molecular H-bond that observed in some protonated form, along with out of plane angle of O atom in protonated AZO	107
55. Table 8.6- The distance of proton from the most basic site and intra molecular H-bond that observed in some protonated form, along with out of plane angle of O atom in protonated AZN	108
56. Table 8.7- The computed Zero point energies and Solvation energies of Free and Protonated 9-chloroazaacridine-4-carboxamides (AZCI) for the most basic sites.	108
57. Table 8.8- The computed Zero point energies and Solvation energies of Free and Protonated 9-oxoazaacridone-4-carboxamides (AZO) for the most basic sites.	108
58. Table 8.9 – The computed Zero point energies and Solvation energies of Free and Protonated 9-aminoazaacridone-4-carboxamides (AZN) for the most basic sites.	108
59. Table 9.1- The computed proton affinities (PA), pKa values and solvation energies of 9-aminoacridine and 9-aminoazaacridine.	116
60. Table 9.2- Variation of interaction energies with protonation of Acridine and base pair stacking.	116
